Empower researchers to make critical decisions, enhance productivity and improve outcomes.

- Content from dozens of Elsevier’s authoritative, peer-reviewed reference works
- Thousands of articles that are continuously reviewed, updated as needed and then date stamped, as well as new articles that extend previous reference works or cover entirely new areas of research
- Intuitive subject hierarchies designed by each module’s expert editorial board that make it easy to navigate the subject area and locate articles on a specific topic
- Includes links to relevant journal articles and book chapters on ScienceDirect for additional information

Alleviate the intense time pressure under which your researchers suffer and put your researchers at the forefront of scientific discoveries. Give them visibility into the world’s research to realize their goals.

“It is certainly a revolutionary way of thinking in that there is no deadline. The researchers who are contributing will have the opportunity to update their articles on new developments in their own field of research. All of which will be included in the online digital source of the Reference Module.”

Saleem Hashmi
Editor-in-Chief for Reference Module in Materials Science and Materials Engineering
Dublin, Ireland

“The discovery and development of materials are hallmarks of the growth of civilizations. Scientists, engineers and researchers search for appropriate materials for the sustainable development of society. The online Reference Module initiative represents a seminal stage in the evolution of scientific practice in materials science and materials engineering. It will cover the entire spectrum of these discourses through a continuously updating, peer-reviewed knowledge base that will seek to address the varied requirements of academics, students and practitioners.”

Shahjahan Mridha, Ph.D
